GAUNTLET Frontend Handoff Report

Status: Partially complete.

1) Status

The GAUNTLET frontend work is partially complete. The app shell, templates, and real API-backed UI pages are present, and Python compilation succeeds. The repository test suite could not be executed in this environment because pytest is unavailable.

2) Files created, modified, or deleted

Created:

- app/templates/base.html ? shared shell, navigation, and page layout
- app/templates/overview.html ? resilience overview page
- app/templates/new_run.html ? run creation form page
- app/templates/run_detail.html ? report and inspector page
- app/templates/evidence.html ? evidence packet and verification page
- app/templates/hardening.html ? hardening recommendation page
- app/templates/settings.html ? system/integration page
- app/templates/not_found.html ? missing run page
- app/static/css/gauntlet.css ? responsive styling system
- app/static/js/gauntlet.js ? shared API/UI helpers
- app/static/js/overview.js ? overview dashboard logic
- app/static/js/new-run.js ? run creation logic
- app/static/js/run-detail.js ? run detail rendering
- app/static/js/evidence.js ? evidence verification UI
- app/static/js/hardening.js ? hardening rendering
- app/static/js/settings.js ? integration status UI
- app/static/favicon.svg ? favicon

Modified:

- app/main.py ? routes, template setup, API endpoints, static mount

Deleted:

- None

3) Pages and routes implemented

- / ? Overview page, backed by /api/health, /api/runs, /api/faults

- /new ? New run page, backed by /api/faults and POST /api/run

- /runs/{run_id} ? Inspector page, backed by /api/runs/{run_id}

- /runs/{run_id}/evidence ? Evidence page, backed by /api/runs/{run_id}/evidence and /api/runs/{run_id}/evidence/verify

- /runs/{run_id}/hardening ? Hardening page, backed by /api/runs/{run_id}

- /settings ? Integration settings page, backed by /api/health

- Not-found fallback for missing run IDs

4) Remaining unfinished tasks and known bugs

- Visual browser QA for desktop/mobile was not performed in-session.

- No live runtime smoke test was completed.

- pytest is not available in this environment, so backend regression/resolution verification could not run.

- UI behavior depends on the backend payload schema; mismatches may break page rendering.

- Repo contains other modified backend files that may affect runtime or tests outside frontend scope.

5) Commands run and actual results

- cd "c:/Users/USER/OneDrive/Desktop/gauntlet"; pytest -q

Result: exit code 1. Error: pytest not found / CommandNotFoundException.

- cd "c:/Users/USER/OneDrive/Desktop/gauntlet"; python -m compileall app

Result: exit code 0. Python package compiled successfully.

6) Browser testing status

No desktop or mobile visual browser testing was performed.

7) Local startup instructions

- python -m app.main

- or uvicorn app.main:app --reload --port 8000

Open: http://localhost:8000

8) Backend/test impact risks

- app/main.py route and API changes may affect startup or route matching.

- All UI pages consume live JSON; backend schema changes can break the frontend.

- Other modified backend files in the working tree may affect runtime or tests outside the frontend scope.

This report is a handoff snapshot only and does not claim full completion or a green test suite because the evidence does not support that status.
